

1. What are your core values and beliefs? (আপনার মূল মূল্যবোধ এবং বিশ্বাস কি?)

Answer: My core values revolve around a strong work ethic, adaptability, a positive mindset approach, and openness to feedback. I believe in embracing different perspectives, except when they're downright bigoted. I'm inquisitive about the blurry line between innocent mistakes and unpunishable acts like betrayals.

2. What are your goals and aspirations? (আপনার লক্ষ্য ও আকাঙ্ক্ষা কি?)

Answer: My immediate goal is to establish a solid foundation in web development and gain practical experience in a professional setting, work on diverse projects, and gradually take on more responsibilities. Long-term, I aim to integrate my web development knowledge with data science which is why I hope to pursue a master's in Data Science later next year.

3. What are the first steps you will take to build your personal brand? (আপনার ব্যক্তিগত ব্র্যান্ড তৈরি করতে আপনি প্রথম পদক্ষেপগুলি কী কী নেবেন?)

Answer: The first step would be creating a professional online presence without making it look like self-promotion. I would like to first be in a community of like-minded people and connect with them as well while also sharing my knowledge or project insights daily so that people on my list get a clear idea of who I am and what things I work with. This includes showcasing my projects on GitHub, participating in community discussions and contributing to open-source projects.

4. How does personal branding differ from self-promotion, and why is this distinction important? (ব্যক্তিগত ব্র্যান্ডিং কীভাবে স্ব-প্রচার থেকে আলাদা, এবং কেন এই পার্থক্য গুরুত্বপূর্ণ?)

Answer: I think personal branding revolves around showcasing skills, projects, and passion for one's field authentically and showing a genuine interest in the field. On the other hand, self-promotion can come off as purely self-serving and short-term. Without substance, it may be perceived negatively. The distinction is important because, as a newbie in this field I think, establishing credibility through genuine contributions and a willingness to learn is the way to go forward.

5. What are you most proud of? (কোন বিষয়ে আপনি সবচেয়ে বেশি গর্বিত?)

Answers: During my teenage years, I developed a strong curiosity for coding, programming languages, and the workings of web development. At the age of 15 in 2013, I harnessed my knowledge to create a blog using WordPress, where I vividly remember using C++. The blog was hosted for free for six months. Unfortunately, due to academic commitments, I became immersed in my studies. Moreover, a lack of understanding of R programming, especially during my statistics major, made me apprehensive about programming languages in general. This led me to briefly question whether the tech field was the right fit for me.

However, I'm proud that, over the last six months, I was able to overcome these challenges and successfully complete a web development course. Today, I take pride in my ability to comprehend the requirements of a MERN stack project. This accomplishment reassures me that, despite past uncertainties, I have the capability and determination to thrive in the tech field.
